

Tell Me About...

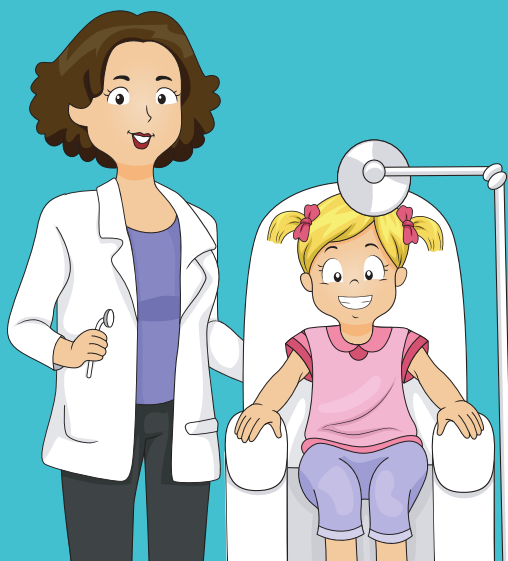

PAEDIATRIC DENTISTRY

WHAT IS A SPECIALIST PAEDIATRIC DENTIST?

Specialist Paediatric Dentists are qualified to deliver high quality complete oral health care for babies, toddlers, children & adolescents .

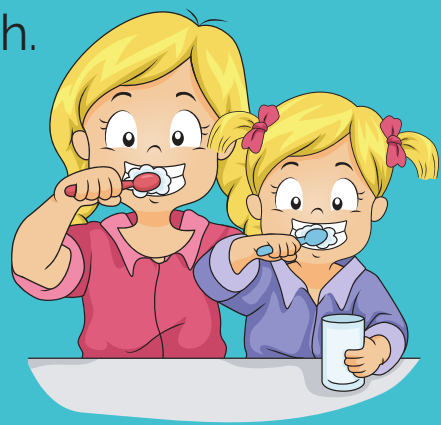

A Specialist Paediatric Dentist is a qualified dentist who has then continued with full time postgraduate training in the Speciality of Paediatric Dentistry at an accredited university.

WHY SHOULD MY FAMILY SEE ONE?

Paediatric Dentists are specialists in spotting problems in young mouths, and can help you to set your child up for a lifetime of good oral health.

Children can often require a specialised approach. Paediatric Dentists have recognised techniques and treatments for very young, or anxious children, especially children with special needs. Your Paediatric Dentist will work with your paediatrician, family doctor, educators and other health care providers to make sure your children start life with the best dental care.

WHAT ABOUT OUR REGULAR DENTIST?

Whilst it may be more convenient for your children to see your family dentist, Specialist Paediatric Dentists have unique skills and techniques for the management of children's dental needs. With dedicated further study and the specialised manner which comes from regularly working with children, they are able to address the emotional as well as the dental needs of your child.
